The Prior Art does not teach or suggest the rotary switch for installation on a disconnect switch to actuate and de-actuate the disconnect switch contacts comprising a stop member on the base for latching the rotor in an "off" position before application of the first force to prevent a rotation of the rotor that would actuate the disconnect switch, a switching mechanism disposed inside the electrical enclosure for operation in response to movement in opposite rotational directions and in an axial direction to control actuation of the disconnect switch; a rotary handle for coupling to the switching mechanism having a first grip for gripping and rotating the handle in one direction and second grip for turning an opposite direction.
